

## Webinar: OCT Essentials for Diabetes

Wednesday 18th September 2024 | 19:00 – 20:00

*Do you want to know more about managing diabetes with OCT?*

As OCT becomes increasingly important in the early detection and management of diabetic eye diseases, understanding the principles and applications of OCT is crucial. That's why ZEISS are proud to present an interactive webinar designed to equip participants with foundational knowledge and essential skills in Optical Coherence Tomography (OCT).

Join us as we cover the basics of OCT technology, its importance in diabetes, visual recognition of clinical signs on OCT and practical tips for best practice - with the opportunity to ask questions throughout.

**A CPD certificate of attendance will be provided.**

The content will be tailored to individuals working within diabetic eye screening services - but anyone with an interest is welcome to attend.

By the end of the session, participants will have an understanding of...

- The importance and benefits of OCT in clinical practice
- Identifying normal retina structures and their appearance on OCT
- Detecting common OCT findings associated with diabetes
- How to differentiate diabetes from other pathology, using visual recognition.
